                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Searched:
          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC - i- FUNCTION. Probably plays a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier, the tight junction (TJ) paracellular permeability barrier.

CC - i- SUBUNIT: Parallel homodimer (By similarity). Binds ZO-1 and ZO-2 CC - in vivo, and ZO-3, myosin and occludin in vitro, possibly in vivo, and ZO-3, myosin and occludin in vitro, consisting the cc. in vivo, and ZO-3, myosin and sociation in vitro, directly. Acts as an F-actin bundling protein in vitro consisted cc. i- ISSUB SPECIFICITY: Localized on the cytoplasmic face of tight cc. junctions of polarized epithelia and some endothelia.

CC - i- TISSUB SPECIFICITY: Localized constant some endothelia.

CC - i- DEVELOPMENTAL STAGE: A maternally synthesized protein. Found in CC constitution of the fortilized egg, where it is associated with cytoskeleton filaments, it is recruited to tight junctions cc. with cytoskeleton filaments, it is recruited to tight junctions before ZO-1 and occludin. Nascent tight junctions are in place before ZO-1 and occludin. Nascent tight junctions are in place before ZO-1 and occludin. Nascent tight junctions are in place before ZO-1 and occludin. Nascent tight junctions are in place before ZO-1 and occludin in the raction motif (ZIM) decreases but cc. - i- DOMAIN: Deletion of the ZO-1 interaction motif (ZIM) decreases but cc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Xenopus laevis (African clawed frog).

SubuNIT: Homodimer (By similarity). Interacts with TJF1/ZO-1. SUBUNIT: Homodimer (By similarity). Interacts with TJF1/ZO-1. TISSUE SPECIFICITY: Localized on the cytoplasmic face of tight placetion of polarized epithelia and some endothelia. Expressed junctions of polarized epithelia and some endothelia. Expressed pancreas, kidney, liver and lung, but not in skeletal muscle, placenta, brain or heart.

DOMAIN: Deletion of the ZO-1 interaction motif (ZIM) decreases b does not abolish colocalization with ZO-1.

"Isolation and characterization of the human perinatal MHC promoter.";

Submitted (MAY-1998) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Muscle contraction.

-!- SUBUNIT: Muscle myosin is a hexameric protein that consists of 2 heavy chain subunits (MHC), 2 alkali light chain subunits (MLC) and 2 regulatory light chain subunits (MLC-2).

-!- SUBCELLULAR LOCATION: Thick filaments of the myofibrils.
-!- DOMAIN: The rodlike tail sequence is highly repetitive, showing cycles of a 28 residue repeat pattern composed of 4 heptapeptides, characteristic for alpha-helical coiled coils.
-!- MISCELLANEOUS: Each myosin heavy chain can be split into 1 light meromyosin (LMM) and 1 heavy meromyosin (HMM). It can later be

-- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mrell complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity.

Rad50 provides an ATP-dependent control of mrell by unwinding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=VF5;

QUIENCE OF 409-1084 FROM N.A. DIINE-87304245; PubMed=3305014; DIINE-87304245; PubMed=3305014; Eda K., Sczakiel G., Wittinghofer A.; haracterization of cDNA coding for the complete light meromyos prition of a rabbit fast skeletal muscle myosin heavy chain."; r. J. Biochem. 167:97-102(1987). FUNCTION: Muscle contraction. FUNCTION: Muscle myosin is a hexameric protein that consists heavy chain subunits (MHC), 2 alkali light chain subunits (MHC), 2 alkali light chain subunits (MHC-2). and 2 regulatory light chain subunits (MHC-2). SUBCELLULAR LOCATION: Thick filaments of the myofibrils. SUBCELLULAR LOCATION: Thick filaments of the myofibrils.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  calcium-binding domains. Domains 2-4, 6, and 8 are almost entialpha-helical, configured as a series of peptide repeats of varying regularity, and are thought to form a single-stranded alpha-helical rod stabilized by ionic interactions. Domain 6 ithe most regular and may bind KIF directly by ionic interactic Domains 5 and 7 are less well organized and may induce folds ithe molecule. Domain 9 contains the C-terminus, conserved amor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DEVELOPMENTAL STAGE: Expressed during late differentiation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBUNIT: Homodimer (Probable).
TISSUE SPECIFICITY: Found in the hard keratinizing tissues such the inner root sheath (IRS) of hair follicles and medulla, and i the filiform papillae of dorsal tongue epithelium (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mitted (DEC-1992) to the EMBL/GenBank/DDBJ databases. FUNCTION: Intermediate filament-associated protein that associates in regular arrays with keratin intermediate filaments (KIF) of the inner root sheath cells of the hair follicle and the granular layer of the epidermis. It later becomes cross-linked to KIF by isodippytide bonds. It may serve as scaffold protein, together with involucrin, in the organization of the cell envelope or even anchor the cell envelope to the KIF network. It may be involved in its own calcium-dependent roots-matherial servers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DOMAIN: Consists of nine domains. Domain 1 contains two

                                                                                                                                                                                                                                                                                                                                  cycles of a 28-residue repeat pattern composed of 4 heptapeptides, characteristic for alpha-helical coiled coils. Characteristic for alpha-helical coiled coils prw. Phosphorylation inhibits thick filament formation and reduces the actin-activated APPase activity.

MISCELLANEOUS: Dictyostelium myosin II has no K(2)EDTA ATPase MISCELLANEOUS: Dictyostelium myosin II has no K(2)EDTA ATPase activity, perhaps correlated with the absence of a Cys at the SH-1 position (688).

SIMILARITY: Contains 1 myosin-like globular head domain.

SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DOMAIN: Each myosin heavy chain can be split into 1 light meromyosin (LMM) and 1 heavy mercomyosin (HMM). It can be further split into 2 globular subfragments (S1) and 1 rod-shaped subfragment (S2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBCELLULAR LOCATION: HIGHEST CONCENTRATION IN THE

SUBCELLULAR LOCATION: Thick filaments of the mofibrils.
DOMAIN: The rodlike tail sequence is highly repetitive, showing cycles of a 28-residue repeat pattern composed of 4 heptapeptides, characteristic for alpha-helical coiled coils.
MISCELLANEOUS: Each myosin heavy chain can be split into 1 light meromyosin (LMM) and 1 heavy meromyosin (HMM). It can later be split further into 2 globular subfragments (S1) and 1 rod-shaped
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SUBUNIT: Muscle myosin is a hexameric protein that consist heavy chain subunits (MEC), 2 alkali light chain subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        subfragment (S2).
SIMILARITY: Contains 1 myosin-like globular head domain.

   FUNCTION: Intermediate filament-associated protein that associated in regular arrays with keratin intermediate filaments (KIF) of the inner root sheath cells of the hair follicle and the granular layer of the epidermis. It later becomes cross-linked to KIF by isodipeptide bonds. It may serve as scaffold protein, together with involucrin, in the organization of the cell envelope or even

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           calcium-binding domains. Domains 2-4, 6, and 8 are almost entirely alpha-helical, configured as a series of peptide repeats of varying regularity, and are thought to form a single-stranded alpha-helical rod stabilized by ionic interactions. Domain 6 is the most regular and may bind KIF directly by ionic interactions. Domain 5 and 7 are less well organized and may induce folds in the molecule. Domain 9 contains the C-terminus, conserved among the molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE SPECIFICITY: Found in the hard keratinizing tissues such the inner root sheath (IRS) of hair follicles and medulla, and the filiform papillae of dorsal tongue epithelium (Probable). DEVELOPMENTAL STAGE: Expressed during late differentiation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ween the Swiss Institute of Bioinforma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    characteristic for alpha-helical coiled coils.
MISCELLANEOUS: Each myosin heavy chain can be split into 1 light
meromyosin (LMM) and 1 heavy meromyosin (HMM). It can later be
split further into 2 globular subfragments (S1) and 1 rod-shaped
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Muscle contraction.
